The screenshot shows a Python 3.7.0 Shell window with the output of a script. The script sends sensor data (Moisture, Temperature, Humidity) to IBM Watson and receives commands (motoron, motoroff) from IBM Watson. The output shows the sensor data being published and the motor being turned on and off.

## 8. Advantages & Disadvantages Advantages:

- Farms can be monitored and controlled remotely.
- Increase in convenience to farmers.
- Less labor cost.
- Better standards of living.

## Disadvantages:

- Lack of internet/connectivity issues.
- Added cost of internet and internet gateway infrastructure.
- Farmers wanted to adapt the use of Mobile App.

## 9. Conclusion

Thus the objective of the project to implement an IOT system in order to help farmers to control and monitor their farms has been implemented successfully.
